

2) Ordenar y representar en recta numérica:

$$\frac{9}{4} ; -\frac{2}{3} ; -\frac{6}{5} ; \frac{7}{3} ; -\frac{7}{4}$$

C.A:

$$\begin{array}{r} 2) \quad 9 \overline{) 4} \\ 10 \quad 2,25 \\ 20 \\ 0 \\ \hline \end{array}$$

$$\frac{9}{4} = 2,25$$

$$\begin{array}{r} 20 \overline{) 3} \\ 20 \quad 0,666 \\ 20 \\ 2 \\ \hline \end{array}$$

$$-\frac{2}{3} = -0,6\hat{6}$$

$$\begin{array}{r} 6 \overline{) 5} \\ 10 \quad 1,2 \\ 0 \\ \hline \end{array}$$

$$-\frac{6}{5} = -1,2$$

$$\begin{array}{r} 7 \overline{) 3} \\ 10 \quad 2,333 \\ 10 \\ 10 \\ \hline \end{array}$$

$$\frac{7}{3} = 2,3\hat{3}$$

$$\begin{array}{r} 7 \overline{) 4} \\ 30 \quad 1,75 \\ 20 \\ 0 \\ \hline \end{array}$$

$$-\frac{7}{4} = -1,75$$
