1. (25 pts) Convertir a base 2 el número 345.

$$345 = 2.172 + 1$$
 $172 = 2.86 + 0$
 $86 = 2.43 + 0$
 $43 = 2.21 + 1$
 $21 = 2.10 + 1$
 $10 = 2.5 + 0$
 $5 = 2.2 + 1$
 $2 = 2.1 + 0$
 $1 = 2.0 + 1$

$$(101011001)_{2} = \overset{\$}{2} \cdot 1 + \overset{\$}{2} \cdot 0 + \overset{\$}{2} \cdot 1 + \overset{\$}{2} \cdot 0 + \overset{\$}{2} \cdot 1 + \overset{\$}{2} \cdot 0 + \overset{\$}{2} \cdot 0 + \overset{\$}{2} \cdot 0 + \overset{\$}{2} \cdot 1$$

$$256 + 0 + 64 + 0 + 16 + 8 + 0 + 0 + 1$$

$$345$$

$$345 = (101011001)_2$$

2. (25 pts) Convertir a base 10 el número $(203112)_4$.

$$(203112)_{4} = 4^{5.2} + 4^{4.0} + 4^{3.3} + 4^{2.1} + 4^{2.1} + 4^{4.2}$$

$$1024.2 + 0 + 64.3 + 16.1 + 4.1 + 1.2$$

$$2048 + 192 + 16 + 4 + 2$$

$$2258$$

$$(203112)_{4} = 2258$$

3. (50 pts) Calcular la resta $(4351)_8 - (2310)_4$ y expresarla en base 5.

$$(4351)_8 = 8^3 \cdot 4 + 8^2 \cdot 3 + 8^4 \cdot 5 + 8^6 \cdot 1 = 512 \cdot 4 + 64 \cdot 3 + 40 + 1 = 2048 + 192 + 41 = 2281$$

$$(2310)_{4} = 4^{3} \cdot 2 + 4^{2} \cdot 3 + 4^{1} \cdot 1 + 4^{0} \cdot 0 = 64 \cdot 2 + 16 \cdot 3 + 4 + 0 = 128 + 48 + 4 = 180$$

$$(4351)_8 - (2310)_4 = 2281 - 180 = 2101$$

$$16 = 5.3 + 1$$

$$3 = 5.0 + 3$$

$$(31401)_{5} = 5^{4} \cdot 3 + 5^{3} \cdot 1 + 5^{3} \cdot 4 + 5^{3} \cdot 0 + 5^{3} \cdot 1$$

$$625 \cdot 3 + 125 \cdot 1 + 25 \cdot 4 + 0 + 1$$

$$1875 + 125 + 100 + 1$$

$$2101 /$$
